Effective Treatment of Chronic Neuritis of the Auditory Nerve Resonance Therapy

Praznikov Victor**Doctor, Omer 8496500, Israel****Corresponding author:** Praznikov Victor, MD, PhD, Doctor, Omer 8496500, Israel, Email: Praznikov@yandex.ru**Received Date:** June 15, 2022**Published Date:** June 22, 2022**Abstract**

The article discusses the problem that "acoustic neuritis" is not the true cause of hearing impairment in patients with impaired activity of the auditory nerve. The author of the article provides effective evidence that patients with "acoustic neuritis" do not have any inflammation of the nerve. The cause of this hearing impairment is a degenerative disease associated with the degeneration of the auditory nerve, more specifically, the demyelination of the auditory nerve. The article presents new methods of treating diseases -the resonance of destruction and the resonance of creation. Previously, it was found that demyelination of nerves, for example, in multiple sclerosis, was effectively treated by the resonance of creation, which restored the myelin sheath of the nerves and cured multiple sclerosis. So, impaired activity of the auditory nerve in case of "acoustic nerve neuritis", and in fact, in case of degeneration of the auditory nerve, is effectively cured by the resonance of creation [1-8].

Keywords: Nevritis; Resonance of destruction; Resonance of creation**Introduction**

What actually happens with the disease called "acoustic neuritis"?

This disease is quite common, especially in the chronic form. The main symptoms are a decrease in hearing acuity and the appearance of noise in the ear, imbalance when walking, often dizziness. The central part of the auditory analyzer or functional auditory system is located in the midbrain, thalamus and auditory cortex. The impulse from the hair cells is carried to the brain by the auditory nerve. The auditory nerve is an integral part of the VIII pair of cranial nerves (vestibulocochlear). First, the auditory nerve enters the brainstem, where the primary perception of sound occurs. Then, from the trunk, the nerve signal enters the temporal lobes of the brain. Acoustic neuritis is generally thought to affect one of three structures: the hair cells, the auditory nerve, or the

nerve centers in the brainstem. Chronic neuritis of the auditory nerve, which is caused by age-related changes, is treated with great difficulty.

The causes of neuritis of the auditory nerve are considered quite a lot. Most of them relate to the occurrence of acute neuritis of the auditory nerve. These are infections, vascular disorders, skull injuries, toxic effects, long-term (professional) exposure to noise and vibration, tumors.

Diagnostics

First of all, a patient with complaints of hearing problems undergo audiometry. Audiometry allows you to determine the level and degree of hearing impairment (that is, it is associated with the structures of the outer or middle ear, or with the inner ear and auditory nerve).

Treatment

In acute and subacute cases, treatment is aimed at restoring hearing almost completely. If the culprit is a viral infection, then antiviral drugs are prescribed. With a bacterial process, antibiotics are indicated. In case of poisoning with a toxic substance, detoxification therapy is carried out. Drugs that improve blood flow and nerve nutrition are used.

In chronic neuritis of the auditory nerve, the question of hearing aid is raised before the doctor.

Thus, chronic neuritis of the auditory nerve is a disease that can make a person disabled, depriving him of one of the most important sense organs.

So what exactly is chronic neuritis of the auditory nerve?

Inflammation? Very doubtful. Especially because conventional treatments for chronic neuritis of the auditory nerve do not include anti-inflammatory treatments. Antihypertensive drugs are used, drugs that lower the level of cholesterol in the blood, reduce blood clotting, improve blood flow in the vessels of the brain, vitamins and biologically active substances, physiotherapy, spa treatment.

The prognosis for such treatment of chronic forms is usually unfavorable.

If anti-inflammatory drugs are not used in the conventional treatment of acoustic neuritis, it becomes clear that in reality there is no inflammatory process at all in this form of the disease, and, therefore, it is absolutely incorrect to call this disease acoustic neuritis. And what processes occur in such a disease?

Resonance diagnostics and therapy

The article discusses two forms of resonance in medicine. The first form is the destruction resonance. It is well known and we have used it to destroy tumors or infection diseases. The second form of resonance is the resonance of creation. It leads to the restoration of degenerated or destroyed organs. We have used the resonance of creation to repair organs.

In our previous works 1. Praznikov V. "Resonant Medicine"- "International Journal of Medical Science and Clinical Invention". 9 (4), p. 5962-5973, 2022 [1]. 2. Praznikov V. «Resonance Medicine as a Method of Augmentation Life Expectance». -Internation Journal of Gerontology and Geriatric Research. -SCIRES Literature. Journal of cancer Prevention and Current Research. V.13, Issue 2-2022 [3] and in monographs [4-8] considered two options for using resonance in medicine-the resonance of destruction and the resonance of creation. Resonance has been used for many years in the treatment of various diseases [1-8]. In this paper, we will consider the possibilities of effective treatment of diseases using the methods

resonance of creation. In the diagnosis and treatment of resonance therapy, the so-called "nosodes" are used-wave copies of various diseases, including oncological ones, and "organopreparations"- wave copies of normally functioning organs. A feature of the use of nosodes and organopreparations in our work was that we used not only low potencies of nosodes and organopreparations, but also high ones [1-8] while in previous works we used only low potencies of nosodes and organopreparations [1-8].

Questions of diagnosis and treatment of diseases are preceded by a summary of what is called "resonance".

Resonance was discovered by Galeleo Galelei in 1604 [9]. The resonance can be most clearly described as follows. A platoon of soldiers approaches the wooden bridge and the officer gives the command to go out of step because if a platoon of soldiers crosses the wooden bridge in step, the bridge can collapse from resonance. The vibrations of the bridge will coincide with the vibrations of the marching soldiers, a resonance will arise, from which the bridge will collapse.

In this review, the role of the bridge is "played" by the disease, and the role of the marching soldiers is "performed" by the therapeutic effect. The soldier commander did not want the bridge to collapse due to the possible resonance. The physician, by contrast, absolutely needs resonance to destroy the disease.

Resonant methods for the study of matter have found wide application in physics, chemistry, biology, and medicine. For example, Nuclear Magnetic Resonance (NMR).

At the end of the 20th century, the method of magnetic resonance imaging (MRI) was developed on the basis of NMR. It is used to obtain images of the human brain, heart, and organs of the digestive tract. For the development of MRI in 2003, the American biophysicist Paul Lauterbur and his English colleague Peter Mansfield were awarded the Nobel Prize in Physiology or Medicine.

In 1975, the German physician Frank Morell came to a completely logical conclusion that if a disease of the organs of the human body is inevitably accompanied by disturbances in their frequency rhythm, then the essence of treatment should be to suppress the emerging "unhealthy" vibrations and restore normal ones.

The vegetative resonance test -VRT, originally proposed in 1991 by the German scientist G. Schimmel [10], allows one point to be examined. Testing only one biologically active point with it makes it possible to assess the state of not only all organs and systems, but also their interconnection.

A computer-based device for resonance therapy was created, which included both diagnostic and therapeutic parts. In a modern device for resonance therapy there is a large selector with diagnostic (they are also therapeutic) markers, information copies of diseases, which are called "nosodes" when it comes to a disease

and “organopreparations” - information copies of healthy organs when a doctor deals with normal, not pathological organs or their parts. “Nosodes” are necessary for the identification and treatment of diseases and “organ products” for testing perfectly healthy organs or their parts. Nosodes are electronic markers about a disease and “organopreparations” information markers about a healthy organ or its part, recorded on a certain medium.

Each test drug has a wave effect on the patient. It is necessary to restore the spectral (frequency) harmony of the patient.

Waves associated with moving particles have nothing to do with the propagation of any electromagnetic field, i.e., to electromagnetic waves. In the physics of electromagnetic, acoustic and other waves, there is no analogue of waves associated with moving particles of matter. All cells, organs and organ systems have wave characteristics, which are a manifestation of the material world, and they can be controlled by a device for resonance therapy.

Resonance of destruction. Diagnostics using fracture resonance

In the activity of a doctor using resonance therapy, a similar process takes place using modern technologies. Diagnostics is performed first. For this, the nosode of the alleged disease is displayed on the computer screen connected to the device for resonance therapy, and it is tested in the patient. If the nosode is “not tested”, then there is no resonance and the arrow on the computer screen does not fall down in the middle of the screen. Therefore, the patient does not have the disease that is displayed by the nosode. In the same case, if the nosode is tested, a resonance arises between the patient and the test drug - the arrow on the computer screen falls and indicates that the patient has the disease, the name of which is the nosode. This is a diagnostic resonance, but not a curative one. This is how resonance diagnostics are carried out in resonance therapy.

Healing using destruction resonance

To treat the identified disease, the doctor must destroy either the tumor or the infectious process with the help of resonance, and for this it is necessary to potentiate the nosode identified in the patient, i.e., find the potency of the nosode that will resonate with the pathological process in the patient and destroy the disease, in other words, a therapeutic resonance is needed. To do this, find that potency of the nosode (usually high), which leads to the fact that when testing this nosode in a patient, the arrow stops falling. Such a potency of the nosode leads to a resonant destruction of the structures of the disease. In other words, the informational content of the nosode in a certain potency is used for the resonant destruction of the structure of the disease, namely the treatment of the found disease. The doctor writes down the informational content of the potentiated nosode on the sugar crumbs and the

patient takes this sugar crumbs and is thus treated, i.e., there is a resonant destruction of the structure of the disease.

The use of resonance therapy for the treatment of various diseases only of extremely low potencies, as in classical homeopathy, did not allow and does not allow to effectively treat many diseases, including oncological diseases, many infectious diseases, etc. In other words, for many years there has been a crisis in resonance therapy, and thus, in general, in resonance medicine [11]. This can be seen in the materials of the annual scientific conferences on resonance therapy.

When it is said that drugs are used in works that exceed the LM potency of drugs, they mean those potencies that are prepared electronically [1-8].

Since 2016, materials have been published on the use of high potency drugs for treatment [1-8]. It was found that drugs of high and ultra-high potency do not cause any side effects, including toxic effects on sick and healthy people. However, high potency drugs have proven to be extremely effective in the treatment of severe and extremely serious diseases such as cancer, infectious diseases, including HIV, stones and cysts in organs [1-8]. In particular, metastatic forms of oncology are effectively treated. It has been established that all those forms of oncological diseases that are in the selector of the device for resonance therapy are effectively treated with drugs of high and ultra-high potencies.

Treatment of patients with nosode preparations exceeding the LM potency (hereinafter - in the F-potency) was not an end in itself. This method was found in Leche.

Resonance of creation

Since 2016, materials have been published on the use of the second direction of therapeutic resonance - “resonance of creation” [1-8]. Resonance can not only destroy, for example, diseases, but also create lost biological structures. This made it possible to treat degenerative diseases.

Resonance can be not only a “resonance of destruction”, but also a “resonance of creation”. This is obviously due to the fact that it is not easy to imagine how the coincidence of frequencies leads to a response that is not destructive, but constructive. In this review, we have presented illustrations of how resonance can be not only destructive, but also constructive, in particular for the treatment of degenerative diseases.

In the treatment with the help of the resonance of destruction, nosodes of diseases were used, from which preparations in the F potency were prepared. This principle has not been effective in the treatment of degenerative diseases. The creation and formation of the principle of “resonance of creation” became possible only as a result of the fact that not nosodes, but organopreparations exceeding the

LM potency were used for treatment. Without organopreparations in the F potency, it is impossible to imagine the use of this principle.

This review presents material related to the treatment of degenerative diseases. This means that treatment is nothing more than the process of restoring organs or organ systems that have undergone changes as a result of diseases or as a result of an aging degenerative process.

Degenerative diseases can also be congenital. It is clear that a significant part of congenital diseases is a consequence of the underdevelopment of an organ or organ system.

In practice, most often after an illness, for example, inflammation or as a result of the senile process, the level of health of the organ falls down to its destruction. Such an organ requires restoration (rehabilitation). The resonance of creation makes it possible to restore an organ or part of it.

Organopreparations are wave preparations (wave copies) of healthy organs or parts of them. Nosodes are wave drugs of the disease.

In the selectors of hardware and software complexes for resonance therapy, there are various organopreparations. For the restoration, rehabilitation of organs, we used organopreparations in the F potency. They were done in the same way as the F potency nosodes.

Diagnosics of the degenerative process by the method. vegetative resonance test

When a patient is tested for a destroyed organ by a tumor, degenerative processes or inflammation, it is no longer tested as normal. In other words, it is tested as problematic. those. on the computer screen, an arrow falls in the middle of the screen, which indicates that the organopreparation has been found correctly. There is a resonance between the organopreparation and the patient. This is a diagnostic resonance, but not a curative one.

Treatment of the degenerative process using the resonance method creation

We find the potency of the organopreparation that leads to resonance with the affected organ, namely, the termination of testing this organ or organ section as problematic. In this case, the arrow stops falling on the computer screen. It is a therapeutic resonance, but not diagnostic. The doctor prepares preparations of healthy organs in the F potency for the patient, writes them down on the sugar crumbs, which the patient takes.

Examination of patients by the method of Vegetative-resonance test showed that in chronic forms of neuritis of the auditory nerve, no causative factors are diagnosed that could cause an inflammatory process -viruses, microbes, fungi, etc. The above confirms the incorrect identification of this disease as inflammatory.

There is no nosode "Acoustic neuritis" in the selector of our device. That is why direct diagnosis of this disease is not possible. The selector does not contain any analogues of the nosodes of this disease. At the same time, we understand that "neuritis", i.e. There is no chronic inflammatory disease. That is why, when diagnosing this disease, we focused not on nosodes, but on organ preparations. In patients with a long history of this disease, the organ preparation "auditory nerve" or "equilibrium auditory nerve" is tested. The central structures of the auditory analyzer - the thalamus and the auditory cortex are not tested in all patients with "acoustic neuritis". There is no organ preparation "hair cells" in the device selector.

Diagnostics showed that in all cases of this disease, the nosode "Multiple sclerosis" and the organ preparation "Myelin sheath of nerves" are tested. It means that this nosode and organ preparation is tested "not in general, in the whole organism", namely in the auditory nerve and in the structures of the auditory analyzer, more precisely in the structures of the functional hearing system. (midbrain, thalamus and cerebral cortex). Such a possibility of targeted diagnostics exists. In other words, we are dealing not with an inflammatory, but with a degenerative disease associated with the destruction of the myelin sheath of the auditory nerve, as well as with the degeneration of the axial cylinder of the auditory nerves in the structures of the auditory analyzer. In this case, not a common manifestation of demyelination and degeneration of nerves throughout the nervous system of the body is presented, but only locally - in the auditory analyzer.

Thus, we justifiably believe that the presented disease should be given a name that is completely adequate to the nature of this disease - "Degeneration of the auditory analyzer".

That is why, in order to treat this nasological unit, taking into account the pathogenesis we have identified, it is necessary to carry out therapy both by the method of destructive and creative resonance, including the treatment of the autoimmune process. In other words, it is necessary to select the nosode "Multiple sclerosis" in high potencies and the organ preparation "myelin sheath of the nerve"-also in high potency. Of course, the "recipe" for treatment included the organ preparation "auditory nerve" or "equilibrium auditory nerve" in high potency. The drugs in high potencies identified for each patient were recorded on sugar grains, which became a medicine for patients and which they took during the course of treatment. In the course of our treatment of patients, they reported an improvement in hearing, and audiometry confirmed the above reports -the "collapse of frequencies" on audiograms decreased. No less important is the fact that the noise in the head or in the ears disappeared in patients, dizziness and unsteady gait stopped. The duration of treatment varied from 1 to 3-4 months. The above indicates the prospects of our method for both diagnosis and treatment.

Conclusion

It has been established that in patients with “acoustic neuritis” there is no inflammatory process in the auditory nerve, but a degenerative process. That is why, the name of the disease should be changed-“degenerative disease of the auditory nerve.” Effective treatment of the degenerative process in the auditory nerve is associated with the use of resonance therapy-the resonance of destruction and, mainly, the resonance of creation. As a result of resonance therapy, hearing is restored in patients, dizziness, unsteady gait stops, and the need for hearing aids disappears.
