## Abstract

We present a ground baking confirmation that machinery can be of invaluable use at time. The aftermaths of this unveiling are further discussed to the point of non-return.

**Keywords:** Happiness; Renewed energy; Raclette; Cofveve; Baking; Pa capona; Bâ lè lârme

## Introduction

The pillars of motivation and well-being are founded on an ancient and venerated substance, coffee. You can toast us on this on. There are no theory to date that can Disbrow it. Not even if you change the grinding degree. In that regard, if anyone does it once more, I will certainly throw a temper tantrum. Even if it would be

a mocha tempt. I will express it here once again, do not change the grinding degree. Another solo event and you would see doppio, sent to a drip to outer space. In this publication, we present a ground baking confirmation of a brand-new machinery for confit preparation (Figure 1).

Figure 1: A wooden box, some electronics, and some sprinkle of magic, that is it. THE coffeesta Sion was born.

## No Further Words Needed

### Software

The embedded software won't ever give you up, won't ever let you down, won't ever run around and dessert you, for it is the uttermost stable software thy eyes will have ever grazed upon. Cofvee is its name and it shall be chanted across the ages. Its backup system via email is a feature even Steve J. would be jealous of.

The ancient writings on the walls of the CoffeestaSion are part of a native language that was spoken in the Republic of Valais (which was independent at that time, what a bless). É pëntchyè che mèton choïn à béire refers to the state of the coffee machine responsible after an unexpected change of the grinding degree; literally, it means Café owners start often to drink. Another inscription, Bâ lè lârme, refers to the user's state after having used the machinery. A state of pure bliss. Literally, tears down under where flowing at a fast rate is omitted for better sounding. Finally, Bâle-me oûna tàssa de café is straightforward to decipher, it means Give me a cup of coffee, referring to the primary use of the whole setup [1-6].

### Result

Be ready for an exhilarating experience like you have never had before. THE best coffee on campus awaits you at a fingertip. From solo to sharing a doppio, through having a doppio for yourself, the

user interface reacts at any single touch in a smoother way than the cream of your coffee. You can even turn on and off the machine during weekends, what a revelation. The embedded box lets you slip in cash, for easy payment (you just need then to register it yourself via a simple menu).

### Aftermaths

Happiness, renewed energy and will to go.

### Conflict of Interest

None as long as you do not change the grinding degree.
